FOR IMMEDIATE RELEASE**Meissner Filtration Products Has Shortened Its Name to Meissner**

It's official – Meissner has shortened its name to align more closely with the agile, responsive organization that our clients have come to rely on for providing more than critical filtration solutions. For the last 40 years, Meissner has expanded its expertise in the pharma and biotech industries beyond filtration into single-use systems, automatic aseptic filling systems, freeze and thaw platforms for critical biopharmaceuticals, and laboratory and technical services. The Meissner name and logo have been streamlined just like our timelines from receipt of order to delivery of critical manufacturing solutions.

Meissner will continue to manufacture the same high-quality products, while delivering the same level of expertise, service, and responsiveness that our clients depend on. The Meissner logo has been updated, too, to reflect this name change, and over time, our product labels, packaging, and documentation will also be updated to better align with how industry already refers to us, as Meissner.

Meissner manufactures advanced microfiltration products and single-use systems for critical pharmaceutical applications, such as sterilization of injectable drugs, and processing of life-enhancing/life-saving therapies. Meissner is a critical supplier to manufacturers of COVID-19 vaccines, therapies, treatments, and associated test kits. Meissner's manufacturing campuses include a headquarters location in Camarillo, California, USA, a European manufacturing location in Castlebar, Ireland, and recently announced plans to invest in the build-out of a \$250 million manufacturing campus in Athens, Georgia, USA. The company is committed to providing customers with innovative and reliable products that simplify and optimize their processes. For more information, call Meissner U.S. Headquarters at +1.805.388.9911, or visit www.meissner.com.
