## **One-Touch®**

Meissner Filtration Products designs, develops, manufactures, and supplies high quality single-use systems. From film to filter, everything necessary to create clean, convenient biocontainer assemblies can be found within our portfolio.

# Single-Use Systems

## Experience One-Touch® Single-Use Systems

The One-Touch® single-use systems portfolio is built on a solid foundation of quality, operational excellence and technical expertise, which is unparalleled in the industry. Our commitment to quality is demonstrated by the use of pre-qualified dynamic single-use component libraries and extensive product quality certification. Combined, they provide an unprecedented level of quality documentation and traceability for each fluid contact component.

We operate in a paperless, highly automated, manufacturing environment with a very high degree of error proofing, and one of the shortest lead times in the industry. Product quality certification is fully integrated and the serialization of each and every single-use product manufactured is one of our quality hallmarks. Our single-use systems design engineers are recognized for their design and scale-up expertise, process flow recommendations and validation support. The profound polymer expertise and the in-house manufacture of many of the underlying components that go into single-use assemblies allows us to elevate our value proposition. Meissner guarantees sterility validation is ensured and maintained according to ISO 11137 methodology.

# Fundamentals

## 1 Biocontainers

TepoFlex® biocontainers are composed of Meissner's five layer polyolefin-based TepoFlex® film, which provides superior extractables and leachables profiles, water vapor and oxygen barriers, and fluid integrity. (Page 6)

## 3 Connectors

Meissner's TepoFlex® biocontainer assemblies can be ordered with a wide range of connectors or end fittings to address the desired process connectivity. (Page 36)

## 5 FlexStation®

These premium rigid outer containers are available in 100 -1000 L volumes and are compatible with standard TepoFlex® biocontainer assemblies. The collapsible containers provide a rugged shipping solution and are also ideal for intra-facility use. A complete line of stainless steel carts is available for the FlexStation® product line. (Page 46)

## 7 FlexCessories™

Meissner offers a line of custom products specifically designed to support and enhance One-Touch® assemblies. (Page 42)

## 2 Tubing

TepoFlex® biocontainer assemblies come standard with either TPE or Platinum-cured silicone tubing. Tubing is available in a variety of lengths and diameters to suit customer specific needs. (Page 41)

## 4 Filters

Meissner's full line of single-use capsule filters are available for use with TepoFlex® biocontainer assemblies. Compact and easy to use, capsule filters are engineered to satisfy the highest standards of filtration reliability and convenience. Capsule filters combine a full range of filter media, pore size ratings and surface areas to satisfy numerous applications. (Page 33)

## 6 BioFlex®

Meissner's BioFlex® single-use fluid path assemblies provide an enhanced level of convenience and maximize the flexibility of single-use and conventional systems. (Page 43)

## 8 QuaDrums®

Available in 50 - 200 L volumes and compatible with standard TepoFlex® biocontainer assemblies, these economic rigid outer containers offer a number of benefits over standard cylindrical drums. Dollies and lids are also available to complement the functionality of the QuaDrum® product line. (Page 45)

# Standard Shapes & Sizes

## 1 2D End-Ported

50 mL - 20 L

End-ported biocontainers feature a hanging design which facilitates complete fluid recovery and ease of handling.

## 2 FlexFill®

500 mL - 5 L

FlexFill® biocontainers are ideally suited for applications where fast and dependable aseptic transfer of small process volumes is required. FlexFill® assemblies allow users to directly transfer sterile bottled liquids to single-use or multiple-use bioreactor systems in non-permissive environments.

## 3 3D Top-Ported for QuaDrums®

50 L - 200 L

Top-ported biocontainers designed for Meissner's QuaDrum® rigid outer containers offer a convenient and space-saving alternative to traditional cylindrical drums.

## 4 3D Top-Ported for FlexStation®

100 L - 1,000 L

Top-ported biocontainers designed specifically for Meissner's FlexStation® rigid outer container.

## 5 3D Top & Bottom-Ported for FlexStation®

100 L - 500 L

Meissner's bottom-ported biocontainer assemblies dispense and drain via gravity, and are built to fit FlexStation® rigid outer containers.

# TepoFlex® Film

Meissner's polyolefin-based TepoFlex® film is optimized for single-use system requirements within the biopharmaceutical industry. The film's exceptional clarity is a testament to its cleanliness. Free of slip agents, TepoFlex® film couples a low leachables profile with the industry's highest combined gas and water vapor barrier properties. This feature mitigates the risk of degradation of culture media, buffers, intermediate and bulk drug products stored in TepoFlex® biocontainers. Both impact and tear resistant, TepoFlex® biocontainers are durable and retain >95% of the film strength in the seams. This quality attribute mitigates the risk of loss of fluid integrity.

TepoFlex® film is certified animal component free (ACF). The film is extruded, manufactured into biocontainers and packaged in ISO Class 7 cleanrooms. TepoFlex®

biocontainers and all sterile BioFlex® fluid path assemblies are supplied gamma-irradiated to ensure an SAL of 10<sup>-6</sup> substantiated according to ISO 11137 methodology.

TepoFlex® film, biocontainers, and components of single-use assemblies are supported by a comprehensive Qualification Guide. This guide brings together all relevant quality documentation and certification in one extractables data document in order to help to speed your qualification and validation process.

TepoFlex® film is manufactured without the use of slip agents to reduce potential product interference and lower the film's overall leachables profile.

Model Solvents	Typical Values*
WFI	< 2 ppm
PBS pH 3	< 2 ppm
PBS pH 11	< 1 ppm
3M NaCl	≤ 1 ppm
96% EtOH	≤ 5 ppm
1% Tween 80	< 5 ppm
0.1M H <sub>3</sub> PO <sub>4</sub>	< 1 ppm
0.5M NaOH	< 1 ppm

\* Extractables:

Typical values represent the upper boundary set by the highest value obtained in the extractables study for TepoFlex® biocontainers – tested for 3 months at 40 °C and 75% RH – from any of the target compounds identified by a comprehensive analytical screen consisting of TOC, IEC, ICP-OES, ICP-AES, GC/MS and LC/MS.

What are slip agents, and what is the benefit of removing them?

Slip agents are polymer additives, commonly referred to as internal lubricants such as oleamide, erucamide and stearamide. When added to the polymer matrix, slip agents migrate to the film's outer layers. This results in a waxy surface coating which imparts surface lubricity, allowing the film to slide easily over itself. However, slip agents reduce film clarity and may interfere with the seal integrity of biocontainers. Most importantly, slip agents are a significant source of extractable substances, have been shown to interfere with bioassays, and may affect product stability and shelf life. TepoFlex® film does not contain slip agents.

Property <sup>1</sup>	Test Protocol	Typical Values	
Optical			
Haze	ASTM D1003-07	5%	
Clarity	ASTM D1746-03	93%	
Total luminous transmittance	ASTM D1003-07	92%	
Barrier			
Water Vapor Transmission Rate <sup>2</sup>	ASTM F1249-06	0.42 g/m <sup>2</sup> • 24h	0.027 g/100 in <sup>2</sup> • 24h
O <sub>2</sub> Transmission Rate <sup>3</sup>	ASTM F1927-07	0.06 cm <sup>3</sup> /m <sup>2</sup> • 24h	0.004 cm <sup>3</sup> /100 in <sup>2</sup> • 24h
CO <sub>2</sub> Transmission Rate <sup>4</sup>	ASTM F2476-05	<1.0 cm <sup>3</sup> /m <sup>2</sup> • 24h	<0.06 cm <sup>3</sup> /100 in <sup>2</sup> • 24h
Fluid Integrity			
Film strength retained in seam	ASTM D882-02	>95%	

TepoFlex® film passes biocompatibility according to USP <87>, USP <88>, USP <661>, ISO 10993 parts 5, 6, 10 and 11, as well as EP 3.1.5.

<sup>1</sup> Determined on samples gamma irradiated at 29.2 - 36.6 kGy.

<sup>2</sup> RH test gas: 100%; RH carrier gas: 0%

<sup>3</sup> RH test gas: 50%; RH carrier gas: 100%

# FlexFill® Transfer Assembly

FlexFill® biocontainer transfer assemblies were specifically designed for fast and reliable aseptic transfer of small process volumes. FlexFill® assemblies allow operators to conveniently transfer bottled cell culture media, sera, reagents, supplements, buffers and microcarriers to a bioreactor. FlexFill® mitigates the risk of product contamination and effectively addresses the challenges associated with directly transferring sterile bottled liquids to single-use or multiple-use bioreactor systems in non-permissive environments. Once filled, the liquid can either be stored in the biocontainer assembly or transferred, incrementally or in its entirety, without any hold up volume to a culture system.

- Volumes from 500 mL to 5 L
- Extra large screw cap port, conveniently located
- Stainless steel FlexCessory™ stand available, for ease of filling
- Readily customizable
- Up to four separate fluid paths may be incorporated
- May include a recirculation loop, customized to interface with any peristaltic pump
- Recirculation flow can occur in either direction, depending on the application

## Meissner Capsule Filters:

Standard TepoFlex® biocontainer assemblies are available with either EverLUX® STW, STyLUX® ST, or SteriLUX® VTH grade capsule filters. These absolute, microbially rated filters meet full traceability requirements for the pharmaceutical industry, and are 100% integrity tested during manufacture. Each product is fully validatable. All capsules are manufactured in conformance to cGMP.

## Filter Types/Sizes:

## Capsule Features:

- High purity polypropylene housing and support materials provide maximum chemical resistance with minimal extractables
- Efficient, compact design minimizes internal hold-up volume
- Permanently assembled, one-piece construction assures reliable fluid filtration with no bypass
- Available with a variety of connectors
- Thermally sealed without glues, adhesives or epoxies, ensuring purity and reliability under severe conditions
- Biologically inert and non-toxic; Contains no adhesives or surfactants, insuring low extractables and rapid rinse-ups
- TepoFlex® biocontainer assemblies may be ordered with any of Meissner's full line of capsule filters. Please see Meissner's "Capsule Filters" or "UltraCap® / UltraCap® H.D." brochures for a full list of available filtration media

# Filter Media Options

## SteriLUX® PVDF

SteriLUX® disposable capsule filters are absolute-rated PVDF membrane filters optimized for sterile filtration, prefiltration and clarification of pharmaceutical and biological solutions. The surface-modified SteriLUX® membrane filter is manufactured by Meissner's proprietary process to provide immediate water-wettability, unmatched flow, high mechanical strength, thermal and chemical stability, and ultra-low binding characteristics.

### Advantages

- Available in 0.1 µm and 0.2 µm ratings for standard biocontainer assemblies
- Qualifies as a sterilizing grade filter per ASTM F838-05 liquid bacterial challenge
- High flow rates at low pressure drops
- Ultraclean – no additives or surfactants
- 100% integrity tested
- Hydrophilic PVDF membrane
- Fully integrity testable in water

## StyLUX® PES

StyLUX® disposable capsule filters are absolute-rated, polyethersulfone membrane filters designed to provide greater bacteria and particle removal at high flow rates and extremely low pressure drops. STyLUX® capsules contain an asymmetric membrane which offers the greatest assurance of filtration performance, stability and service life for controlling contaminants in demanding environments. The highly porous polyethersulfone membrane is permanently hydrophilic, has exceptional flow rates, and provides excellent compatibility and extremely low extractables in a wide range of fluids and applications.

### Advantages

- Available in 0.1 µm and 0.2 µm ratings for standard biocontainers
- Qualifies as a sterilizing grade filter per ASTM F838-05 liquid bacterial challenge
- Extremely high flow rates at low pressure drops
- Ultraclean – no additives, surfactants, or post treatments
- 100% integrity tested during manufacture

- High thermal and hydrolytic stability
- Extremely low protein and preservative binding
- Extremely low extractables
- Cleanroom manufactured

### Applications

SteriLUX® capsule filters can be used to filter microbiological growth media, cell and tissue culture media and additives, bulk pharmaceutical chemicals, acids, bases, organic solvents, pharmaceutical preparations and active ingredients, parenterals, biopharmaceuticals, vaccines, serum, blood products, ophthalmic solutions, orals, topicals, protein solutions, buffers, salts, diluents, diagnostics, cosmetics and toiletries, solvent/product mixtures, reagents, water for injection (WFI), and compressed gases.

### Specifications

Filter Media: Polyvinylidene Fluoride (PVDF)  
Membrane

- Fully integrity testable in water
- Permanently hydrophilic membrane
- High thermal and hydrolytic stability
- Wide chemical compatibility through pH range 1-14
- Highly passive to protein adsorption, low binding
- Reliable integrity under severe process conditions
- Cleanroom manufactured

### Applications

StyLUX® capsule filters offer the greatest security for high quality filtration in a wide variety of applications. STyLUX® capsules are designed for removal of particulates, colloids and microorganisms from a broad range of pharmaceutical and biological liquids. Typical liquids include pharmaceutical preparations, antibiotics, vaccines, protein solutions, immunologicals, virus suspensions, radiodiagnostics, enzymes, ophthalmic solutions, reagents, salt solutions, nutrients, tissue culture media, serum and blood-based products, biologicals and many more.

### Bacterial Retention:

ASTM F838-05 Challenge

0.1 µm, 0.2 µm > 10<sup>7</sup> LRV/cm<sup>2</sup>

*Brevundimonas diminuta*

0.1 µm and 0.2 µm meet the FDA definition of a sterilizing grade filter

Data shown is for CS style capsule with 3/8" HB connections. Consult factory for complete flow rate information.

### Specifications

Filter Media: Polyethersulfone (PES)  
Membrane

### Bacterial Retention:

ASTM F838-05 Challenge

0.1 µm, 0.2 µm > 10<sup>7</sup> LRV/cm<sup>2</sup>

*Brevundimonas diminuta*

0.1 µm and 0.2 µm meet the FDA definition of a sterilizing grade filter

Data shown is for CS style capsule with 3/8" HB connections. Consult factory for complete flow rate information.

# EverLUX® PES

The EverLUX® polyethersulfone (PES) capsule filter is designed for very high contaminant capacity, extended service life and high flow with low pressure drop in a wide range of biological fluids. Optimized for sterile filtration, prefiltration and clarification applications, the permanently hydrophilic EverLUX® membrane offers up to 2.5 times higher flow rates than other PES membranes. Its asymmetric structure extends the membrane's capacity and service life by withstanding higher particle loads and protein concentrations. Increased membrane thickness allows the EverLUX® to retain its sterilizing properties, while its tapered pore structure allows more contaminant capacity than even conventional PES membranes. The fast-flowing, high-throughput, low-binding and bacteria-retentive properties of the EverLUX® PES membrane make it a very reliable, cost effective and time saving filter.

## Advantages

- Available in 0.2 µm ratings for standard biocontainers
- Pharmaceutical validated, sterilizing grade
- Unique, patented PES membrane with very high flow rates and exceptional service life
- Minimum pressure drop

- Chemical compatibility across pH 1-14
- Low adsorption, high transmission of proteins, active ingredients, and preservatives
- Superior throughput in high contaminant fluids, including growth media, serum and protein-containing solutions.
- Lower filtration costs through increased service life and contaminant-holding capacity
- Fully integrity testable in water
- 100% integrity tested during manufacture
- Cleanroom manufactured

## Applications

EverLUX® capsules are frequently used for buffers, blood products, complex biologicals, serum, cell and tissue culture media, process intermediates, supernatants, vaccines and ophthalmic solutions.

## Specifications

Filter Membrane: Polyethersulfone (PES)

EverLUX® capsules are made with filter media which meets the criteria for a non-fiber releasing filter as defined in 21 CFR 210.3 (b)(6). EverLUX® capsule components are biosafe in compliance with USP Class

VI Plastics biologicals reactivity tests. All materials of construction are FDA approved for food contact use per CFR Title 21,177.

### Bacterial Retention:

ASTM F838-05 Challenge:

STW 0.2 µm > 10<sup>7</sup> cfu/cm<sup>2</sup>

Brevundimonas diminuta

STW 0.2 µm meets the FDA definition of a sterilizing grade filter.

EverLUX® Capsule Typical Water Flow Rates

Data shown is for CS style capsule with 3/8" HB connections. Consult factory for complete flow rate information.

\* The filter media listed are available with standard biocontainer assemblies, but other filters may be ordered with custom assemblies.

\* To view Meissner's full range of filter media, please visit [www.meissner.com](http://www.meissner.com).

# Connector Selection

## PC Quick Disconnect Couplings (QDC)- MPC Series

### Materials

- Polycarbonate (PC)
- Animal Component Free (ACF)

### Common Vernacular

- Coupling Body
  - Female QDC or MPC body
- Sealing Plug
  - Male / QDC / MPC Plug
- Coupling Insert
  - Male QDC or MPC Insert
- Sealing Cap
  - Female QDC or MPC Cap

### Typical Usage and Applications

- Industry standard quick connect
- Buffer and culture media transfer lines
- Filter and tubing sets
- More economical than polysulfone series

### Connectivity

- Coupling Body
  - 1/8" (3.2 mm), 1/4" (6.4 mm) or 3/8" (9.5 mm) HB
  - Female quick connect interface
- Sealing Plug
  - Male quick connect interface
- Coupling Insert
  - 1/8" (3.2 mm), 1/4" (6.4 mm) or 3/8" (9.5 mm) HB
  - Male quick connect interface
- Sealing Cap
  - Female quick connect interface

### Gamma Irradiation

- Blue in color pre-gamma irradiation
- Grey to clear post-gamma
- Up to 50 kGy

## PC Large Bore Quick Disconnect Couplings - MPX Series

### Materials

- Polycarbonate (PC)
- Animal Component Free (ACF)

### Common Vernacular

- Coupling Body
  - Female QDC or MPX Body
- Sealing Plug
  - Male / QDC / MPX Plug
- Coupling Insert
  - Male QDC or MPX Insert
- Sealing Cap
  - Female / QDC / MPX Cap

### Typical Usage and Applications

- Industry standard large bore quick connect
- Buffer and culture media transfer lines
- Filter and tubing sets
- More economical than polysulfone series

### Connectivity

- Coupling Body
  - 1/2" (12.7 mm) HB
  - Female large bore quick connect interface
- Sealing Plug
  - Male large bore quick connect interface
- Coupling Insert
  - 3/8" (9.5 mm) or 1/2" (12.7 mm) HB
  - Male large bore quick connect interface
- Sealing Cap
  - Female large bore quick connect interface

### Gamma Irradiation

- Blue in color pre-gamma irradiation
- Grey to clear post-gamma
- Up to 50 kGy

## Connector Selection (continued)

### Luer Fittings

#### Materials

- Polypropylene (PP)
- Animal Component Free (ACF)

#### Common Vernacular

- Luer-Lok™

#### Typical Usage and Applications

- Sampling operations
  - Small volume sample chambers
  - Syringe sampling
- Industry standard small flow connectivity

#### Principle Components

- Luer x HB Adapters
- Luer Caps

#### Connectivity

- 1/8" (3.2 mm) to 1/4" (6.4 mm) HB
- Female and Male Luer Connections

#### Gamma Irradiation

- Up to 50 kGy

### Tubing Clamps

#### Materials

- Large Clamp – PBT
- Medium and Small Clamps – Polypropylene

#### Common Vernacular

- Pinch Clamp
- Ratchet Pinch Clamp

#### Typical Usage and Applications

- When activated stops or constricts flow on given tubing line

#### Connectivity

- Large Clamp – Outer tubing up to 3/4" (19.0 mm) in diameter
- Medium Clamp – Outer tubing up to 7/16" (11.1 mm) in diameter
- Small Clamp – Outer tubing up to 1/4" (6.4 mm) in diameter

### Protective Covers

#### Typical Usage and Applications

- For protection of components during shipping and storage, not intended for in process use.

#### Materials of Construction

- Vinyl

## Connector Selection (continued)

### TC Fittings

#### Materials

- Polypropylene (PP)
- Platinum-cured silicone (TC Gaskets)
- Animal Component Free (ACF)

#### Common Vernacular

- Sanitary Fittings
- Tri-Clamp® Fittings

#### Typical Usage and Applications

- Single-use / multi-use process equipment connectivity
- Large volume drain / fill lines
- High flow rate applications

#### Principle Components

- TC x Hose Barb Adapters
- TC Gaskets
- TC Blind Caps
- TC Clamps

#### Connectivity

- 1/4" (6.4 mm), 3/8" (9.5 mm), 1" (25.4)
- 1/2" (12.7 mm), or 3/4" (19.0 mm) HB
- TC Sizes: 3/4" (19.0 mm), 1" - 1 1/2" (25.4 - 38.1 mm)

#### Gamma Irradiation

- Up to 50 kGy

### PSU Quick Disconnect Couplings (QDC) - MPC Series

#### Materials

- Polysulfone (PSU)
- Animal Component Free (ACF)

#### Common Vernacular

- Coupling Body
  - Female QDC or MPC Body
- Sealing Plug
  - Male / QDC / MPC Plug
- Coupling Insert
  - Male QDC or MPC insert
- Sealing Cap
  - Female / QDC / MPC Cap

#### Typical Usage and Applications

- Industry standard quick connect
- Buffer and culture media transfer lines
- Filter and tubing sets
- Higher temperature rating than polycarbonate makes it more suitable to applications where autoclaving may be required

#### Connectivity

- Coupling Body
  - 1/8" (3.2 mm), 1/4" (6.4 mm) or 3/8" (9.5 mm) HB
  - Female quick connect interface
- Sealing Plug
  - Male quick connect interface
- Coupling Insert
  - 1/8" (3.2 mm), 1/4" (6.4 mm) or 3/8" (9.5 mm) HB
  - Male quick connect interface
- Sealing Cap
  - Female quick connect interface

#### Gamma Irradiation

- Up to 50 kGy
- Minimal color shift post-gamma; Yellow in color

## Connector Selection (continued)

### PSU Large Bore Quick Disconnect Couplings - MPX Series

#### Materials

- Polysulfone (PSU)
- Animal Component Free (ACF)

#### Common Vernacular

- Coupling Body
  - Female QDC or MPX Body
- Sealing Plug
  - Male / QDC / MPX Plug
- Coupling Insert
  - Male QDC or MPX Insert
- Sealing Cap
  - Female / QDC / MPX Cap

#### Typical Usage and Applications

- Industry standard large bore quick connect
- Buffer solution and cell culture media transfer lines
- Filter and Tubing sets
- Higher temperature rating than polycarbonate makes it more suitable to applications where autoclaving may be required

#### Connectivity

- Coupling Body
  - ½" (12.7 mm) HB
  - Female large bore quick connect interface
- Sealing Plug
  - Male large bore quick connect interface
- Coupling Insert
  - 3/8" (9.5 mm) or ½" (12.7 mm) HB
  - Male large bore quick connect interface
- Sealing Cap
  - Female large bore quick connect interface

#### Gamma Irradiation

- Up to 50 kGy
- Minimal color shift post-gamma; Yellow in color

### Sampling and Injection Sites

#### Materials

- Needleless Injection Site
  - Polycarbonate
  - Silicone
- Traditional Injection Site (Latex Free)
  - ABS
  - PVC
  - Polyisoprene

#### Common Vernacular

- Septum Port
- Swabable Valve
- Sample Port

#### Typical Usage and Applications

- Sampling operations
  - Small volume sample chambers
  - Syringe sampling
- Industry standard small flow connectivity

#### Connectivity

- Needleless Sample/Injection Site
  - Connection – Male Luer
  - Sample/Injection Site – Female Luer
- Traditional Sample/Injection Site
  - Connection – Male Luer
  - Sample/Injection Site – Needle

## Connector Selection (continued)

### Hose Barb Fittings

#### Materials

- Polypropylene (PP)
- Animal Component Free (ACF)

#### Typical Usage and Applications

- Sampling systems
- Tubing manifolds

#### Connectivity

- 1/8" → 1" Hose Barbs  
(3.2 mm → 25.4 mm)

#### Gamma Irradiation

- Up to 50 kGy

### Single-Use / Multiple-Use Interface

#### Materials

- Polysulfone (PSU)
- Seals – Silicone
- Animal Component Free (ACF)

#### Common Vernacular

- STC Fitting
- Steam-Thru® Connection
- Steam Fitting

#### Typical Usage and Applications

- Sterile connection of a pre-sterilized single-use system to conventional fixed, e.g., stainless steel equipment
- Harvest from bioreactor to pre-sterilized single-use systems
- Feed from single-use systems to bioreactors

#### Connectivity

- To single-use system: 3/8" (9.5 mm) or 1/2" (12.7 mm) HB
- To process equipment: 3/4" TC Connection
- To steam trap: 3/4" (19.1 mm) TC

#### Gamma Irradiation

- Up to 50 kGy

### Quick Disconnect Couplings with integrated valves - HFC Series

#### Materials

- Polysulfone (PSU)
- Seals – Silicone
- Animal Component Free (ACF)

#### Common Vernacular

- HFC fitting
- QDC with shut-off valve
- Aseptic Disconnect

#### Typical Usage and Applications

- Disconnections without the possibility of spilled process fluid
- Disconnections aseptically outside of controlled areas
- Commonly used in lieu of tube sealer or where tubing material, e.g., silicone, cannot be heat sealed

#### Connectivity

- Coupling Body
  - 1/4" (6.4 mm), 3/8" (9.5 mm), or 1/2" (12.7 mm) HB
  - Female quick connect with integrated valve interface
- Coupling Insert
  - 1/4" (6.4 mm), 3/8" (9.5 mm), or 1/2" (12.7 mm) HB
  - Male quick connect with or without integrated valve interface

#### Gamma Irradiation

- Up to 50 kGy

# Tubing Selection

## For Standard Biocontainer Assemblies

### M-Flex™ TPE (thermoplastic elastomer)

Meissner's manufactured M-Flex™ TPE tubing offers high performance for critical pharmaceutical and biopharmaceutical applications. M-Flex™ TPE can be thermally welded and sealed to accommodate aseptic connection and disconnection for maximum flexibility in your process using standard TPE settings on most common thermal sealers/welders.

### Platinum-Cured Silicone

Meissner uses top quality platinum-cured silicone manufactured specifically for use within the biopharmaceutical and pharmaceutical markets. This ultraclean tubing comes standard in 50A durometer, is certified Animal Component Free (ACF), and is compatible with peristaltic pumping operations.

## Also Available

### High Durometer and Extended Life

Higher Durometer and Extended Life Silicone Tubing – Meissner offers silicone tubing in a higher durometer formulation, 65A, for applications where tubing resilience may be required, such as in extended time peristaltic pumping applications (e.g., recirculation mixing, TFF applications, etc.).

### PVC

Meissner offers medical grade radiation stable PVC tubing for applications where RF weldability, tubing clarity, and/or process economics are primary drivers.

### Other

Meissner can accommodate custom tubing requirements as necessary, e.g., C-Flex® 374, AdvantaFlex® TPE, Sta-Pure®, Tygon®, etc. Please contact Meissner for further details.

Meissner has developed a line of accessories to complement our One-Touch® single-use systems portfolio called FlexCessories™. The products in this portfolio are designed to facilitate the secure deployment and streamlined implementation of single-use systems.

Meissner's FlexCessory™ dual end-ported biocontainer cart provides an added level of convenience and security when deploying end-ported biocontainer assemblies. The stand can support up to two 20 L end-ported biocontainers and is adjustable to a height of 72 inches. Biocontainer assemblies can be supported directly on the notched head of the cart or hung from an ergonomically designed stainless steel FlexCessory™ hanger.

The stand is equipped with two locking wheels to ensure security while stationary and is designed with a footprint that ensures dynamic stability. The height can be easily adjusted by using the

center post clamp. The stainless steel cart incorporates two removable polycarbonate drip trays in its base for ease of sanitization. Optional attachments are available to secure single-use filter capsules, such as the UltraCap® H.D. capsule filter, to the cart's center post. This arrangement is ideal for use with single-use assemblies designed to accommodate pre-use filter integrity testing procedures.

Meissner's FlexCessory™ stainless steel hanger is designed for use with Meissner end-ported biocontainer assemblies from 5 L to 20 L. It is ergonomically shaped to offer maximum comfort when lifting and hanging biocontainer. The hanger can be used alone or with the dual end-ported biocontainer cart to provide additional functionality. FlexCessory™ hangers provide operators a convenient way to hang biocontainer assemblies from mixing equipment, bioreactors, lab benches, etc.

# BioFlex® Fluid Path Assemblies

Meissner's BioFlex® single-use fluid path assemblies provide secure fluid transfer in critical biopharmaceutical processing applications. The assemblies reduce process risk while providing an enhanced level of convenience that maximizes flexibility in the deployment of single-use systems, as well as conventional systems.

Customizable to process requirements, the assemblies are available with a range of connectivity, tubing and accessory component options to achieve the functionality necessary for your process. Fluid path assemblies can be integrated with filter capsules in a selection of surface areas and media to cater to applications ranging from process stream sterilization and clarification to sterile venting applications. Meissner has extensive experience in single-use system design and implementation and can deliver customized designs using pre-qualified components in some of the industries' shortest lead times.

Meissner's BioFlex® fluid path assemblies are supplied with comprehensive documentation and traceability. Each assembly is serialized, which may reduce batch record requirements in some cases. When the fluid path assembly includes a filter, the filter serial number is linked to the assembly's serial number. Meissner provides a single cohesive certification package for the complete fluid path assembly which includes component specific lot number information, TSE risk and qualification status as well as applicable filter certification material and specific gamma irradiation dosage information.

## Sterilization

Meissner fluid path assemblies are supplied gamma irradiated at a dosage which has been substantiated as a sterilizing dosage via ANSI/AAMI/ISO 11137-2:2006 methodology.

## Assembly Design, Components and Filters

The fluid path assembly configurations on page 44 illustrate a variety of common applications, although they have unlimited permutations. Assemblies are configured from our comprehensive library of pre-qualified components. For applications which require filtration, Meissner offers capsule filters for processing volumes from 10 mL to over 10,000 L in a wide variety of filtration media.

## Connecting Stainless Steel Process Equipment to Stainless Steel Process Equipment

CR2VTH0.1-1T0C4 → Steam Through Connector

Steam Through Connector → Steam Through Connector

## Connecting a Single-Use System to Stainless Steel Process Equipment

Quick Connect → CS2ST0.2-224 → Steam Through Connector

Aseptic Connector → Steam Through Connector

## Connecting a Single-Use System to a Single-Use System

Quick Connect → CF2ST0.1-33B4 → TPE Tubing & Plug

Quick Connect → Quick Connect

## Connecting Stainless Steel Process Equipment to a Single-Use System

CR2ST0.2-2T0C4 → T to Flush Biocontainer → MPX

Quick Connect → T to Sampling Line → Quick Connect

### Notes:

- Arrows indicate flow direction
- Steam Through Connectors provide aseptic connectivity between SUS and stainless steel process equipment
- TPE (Thermo Plastic Elastomer) Tubing + Plug is for use in conjunction with tubing welders
- Aseptic Connectors are designed to allow sterile connections to be made outside of controlled environments
- Quick Connects can be manipulated aseptically under a laminar flow hood

# QuaDrum®

## Rigid Outer Containers

Designed to make the most efficient use of floor space, Meissner's QuaDrum® containers offer easy, accurate and repeatable biocontainer deployment relative to standard drums. The footprint of the QuaDrum® container creates a more stable rigid outer container than a cylindrical drum. Polyethylene QuaDrum® containers are chemically resistant and easy to sanitize. Stainless steel dollies are available for QuaDrum® containers and offer mobility and an added level of dynamic stability during intra-facility transport.

### Ordering Information

# FlexStation®

## Rigid Transport & Shipping Containers

FlexStation® rigid transport and shipping containers are available in standard sizes of 100, 200, 500 and 1000 liters to fit Meissner's TepoFlex® 3D biocontainers. These durable plastic outer containers are reusable and collapsible for storage and handling when not in use. When used in combination, Meissner's One-Touch® single-use systems portfolio of TepoFlex® biocontainers deployed in 100 L, 200 L, and 500 L FlexStation® rigid outer containers has been qualified for liquid transport in accordance with International Safe Transit Association (ISTA) Series 3 testing. For an overview and summary of our ISTA 3H testing, please reference the Rigid

Outer Containers Green Docs on our website. FlexStation® containers complement Meissner's line of single-use TepoFlex® biocontainers to provide robust fluid management solutions ideally suited for intra-facility transfers and inter-facility transport of buffers, culture media, and bulk product, or simply as a cost-effective alternative to stationary stainless steel storage bins.

Meissner also offers stainless steel carts and pallet trucks specifically designed for FlexStation®. These accessory carts allow for easy intra-facility FlexStation® movement.

FlexStation®, FlexStation® Accessory Carts

# Stainless Steel Bins

Meissner Filtration Products, Inc. collaborates with ConeCraft Incorporated, a premier manufacturer of stainless steel outer containers serving the biopharmaceutical industry. ConeCraft is recognized for their expertise and innovation in designing rigid outer containers for integration with single-use systems. The combination of ConeCraft's core competency with Meissner's single-use system design and manufacturing expertise provides customized fluid handling solutions that are unrivaled in the industry.

TepoFlex® biocontainer assemblies complement ConeCraft's custom stainless steel containers for complete single-use fluid management solutions.

- Mobile or stationary systems
- Single or multi-bins, modules and skids
- Various heating/cooling and insulation options
- Temperature measurement
- Integrated mixing through internal or external recirculation loops
- Non-invasive volume measurement using pressure transducers, load cells and guided wave radar (GWR)
- Integrated capsule filters

# Frequently Asked Questions

## 1 Why should I consider switching to a single-use system?

- Cleaning requirements are reduced, minimizing associated validation requirements.
- Campaign turnaround times are reduced.
- The risk of cross-contamination is minimized.
- Process equipment validation is simplified and less time consuming.
- Single-use systems allow for greater flexibility and easy product campaigning.

## 2 Why should I choose One-Touch® over another single-use system?

From chambers to tubing to filters, Meissner can guarantee the forward and backward traceability of every component in your biocontainer assembly. Our single-use systems are manufactured and packaged in an ISO Class 7 cleanroom, where every component is monitored by Meissner's integrated MRP/MES system, referred to as Meissner Virtual Production (MVP). Exceptional laboratory and engineering services coupled with unmatched quality and traceability make Meissner a smart supply choice.

## 3 Can Meissner customize my TepoFlex® biocontainer assembly?

Meissner offers various levels of customization to suit our clients' needs. We frequently fit chambers with customer-specified tubing lengths or connectors, and can easily create tubing sets to provide additional flexibility. Our engineers can also create custom biocontainers to meet the requirements of your specified rigid outer container.

## 4 Why is the filter located upstream of the chamber?

TepoFlex® biocontainers are designed to hold sterile fluids for extended periods of time. Consequently, removing bioburden before it enters the chamber allows for maximum filter efficiency and helps maintain the quality of the customer's product.

## 5 Are One-Touch® biocontainers sterile?

TepoFlex® biocontainers are gamma irradiated at 25-40 kGy, ensuring an SAL of  $10^{-6}$ .

## 6 Where are TepoFlex® biocontainers manufactured?

Meissner manufactures each of its biocontainers in a cGMP facility. The extrusion of TepoFlex® film, manufacture of chambers, and assembly operations all take place in ISO class 7 cleanrooms.
